ToF-CIMS
Chemical Ionization Time-of-Flight Mass Spectrometer

Real-time chemical analysis of trace gases, aerosols, or atmospheric ions.

**APPLICATIONS**

- Online identification and quantification of trace gas- or particle-phase compounds
- Laboratory, field, or mobile platform based experiments
- Air quality and climate change research

**ADVANTAGES**

- Quantitative response with broad dynamic range
- Sub pptv gas-phase limits of detection
- Molecular identification and elemental speciation
- Interchangeable ionization sources for selective detection of different chemical classes
- High-speed data acquisition
- Low power, field portable assembly

**INTERCHANGEABLE INLETS AND IONIZATION SOURCES**

The ToF-CIMS is used with three different chemical ionization sources, which can be easily interchanged by the user.

- **Flow Tube Ion Molecule Reaction Chamber (IMR):** Reduced, tuneable pressure (30 to 500 mbar) reaction ionization chamber for use with acetate, iodide, and water cluster reagent ions. Compatible with Po or X-ray ionizer. The standard configuration uses a gas-phase inlet. The IMR can optionally be used with the FIGAERO Inlet, which enables real-time chemical analysis of gas and aerosols.

- **Atmospheric Pressure Drift Tube Reaction Chamber:** For use with nitrate reagent ion. Measurement of highly oxidized gas-phase organic compounds. Not compatible with FIGAERO.

- **Extractive Electrospray Ionization Source (EESI):** Ionization source for online molecular analysis of aerosols.
TOF Mass Analyzer
The ToF-CIMS is available in two models that differ in size and mass resolving power.

Performance and Specifications

- **Gas-Phase LOD**: For example, 4 pptv formic acid (1 s, Bertram, 2011), 0.4 pptv malonic acid (15 s, Lee, 2014)
- **Aerosol LOD, FIGAERO**: For example, 4 ng/m³ formic acid and 2 ng/m³ C₉ pinene acid (Lopez-Hilfiker, 2014)
- **Aerosol LOD, EESI**: 1 ng/m³ dipentaerythritol and raffinose (Lopez-Hilfiker and Slowik, in prep)
- **Mass Range**: 0 to 1000 Th
- **Save Rate**: Up to 200 complete mass spectra/second
- **Detection polarity**: Bipolar TOF mass analyzer
- **Power**:
  - ToF-CIMS: <2 kW peak, <1.3 kW steady state
  - FIGAERO: < 0.5 kW
- **Sample Flow Rate**:
  - IMR: 2 lpm
  - FIGAERO: 2 lpm gas, 5 - 15 lpm aerosol
  - Atm Pressure Drift Tube: 10 lpm
  - EESI: 1 lpm

Software
Tofware is an Igor-based post processing software, with workflows for quantification and high-resolution peak fitting and identification.
